Employment trend rising

Trend estimates of employed persons have been rising since February 1993. The trend in full-time employment has been increasing since October 1992, while part-time employment has increased in each of the last six months. Trend estimates of unemployment increased for the fifth successive month in October 1993, after falling between December 1992 and May 1993. The trend estimate of the unemployment rate increased to 11.1 per cent in October 1993 and the trend participation rate rose to 62.9 per cent.

Employment

The October seasonally adjusted estimate of employed persons was 7 807 000, an increase of 32 200 since September. The estimate of full-time employment increased by 47 600 to 5 964 400, mainly due to an increase of 30 700 in the number of females employed full-time, which now stands at 1 926 300. Male full-time employment increased by 16 900 to 4 038 100. Part-time employment fell in the month, with decreases in the number of both males and females employed part-time.

Unemployment

The seasonally adjusted estimate of unemployed persons in October 1993 was 982 000, an increase of 34 800 since September. The number of unemployed persons seeking full-time work increased by 21 800 to 821 900, mainly due to an increase of 15 200 in the number of unemployed males looking for full-time work. The number of unemployed persons looking for part-time work increased to 160 200, due to an increase of 13 100 in the number of unemployed females seeking part-time work. Female unemployment was 396 600, a rise of 19 700 since September, while male unemployment increased by 15 100 to 585 400.

LABOUR FORCE SURVEY ESTIMATES
Seasonally adjusted

	Employed				Unem- ployment rate — per cent —	Partici- pation rate — per cent —
	Full-time workers	Part-time workers	Total — '000 —	Un- employed		
1993						
May	5 915.1	1 781.8	7 696.9	924.8	10.7	62.2
June	5 955.2	1 780.8	7 736.0	966.4	11.1	62.8
July	5 917.8	1 817.3	7 735.1	924.3	10.7	62.4
August	5 908.9	1 820.7	7 729.6	963.5	11.1	62.6
September	5 916.8	1 857.9	7 774.7	947.2	10.9	62.7
October	5 964.4	1 842.6	7 807.0	982.0	11.2	63.1

Unemployment rate

The seasonally adjusted estimate of the unemployment rate was 11.2 per cent, an increase of 0.3 percentage points since September. For males, the unemployment rate increased by 0.2 percentage points to 11.5 per cent while for females, the unemployment rate increased by 0.4 percentage points to 10.7 per cent.

Participation rate

The seasonally adjusted estimate of the labour force participation rate in October was 63.1 per cent, an increase of 0.4 percentage points since September. For males, the participation rate increased by 0.2 percentage points to 74.0 per cent. For females, the participation rate rose by 0.6 percentage points and now stands at 52.6 per cent, equal to the highest level recorded by the survey.

For further information order the publication *The Labour Force, Australia, Preliminary (6202.0)* or contact Heather Crawford on (06) 252 6525.

Manufactured goods prices up

The price index of articles produced by manufacturing industry increased by 0.5 per cent in September 1993.

Price increases were recorded for about 40 per cent of the items in the index. The main contributors to the increase were meat (excluding smallgoods and poultry) which rose 3.3 per cent and refined petroleum products, up 2.5 per cent.

These price increases were partly offset by small price falls for about 20 per cent of the items in the index.

The Manufacturing Division index increased by 1.8 per cent between September 1992 and September 1993.

PRICES OF MANUFACTURED GOODS, SEPTEMBER 1993
Percentage change

Manufacturing sector	From previous month	From corresponding month of previous year
Food, beverages and tobacco	1.2	5.6
Transport equipment	0.6	2.8
Other industrial machinery	0.2	1.3
Clothing and footwear	0.3	1.2
Fabricated metal products	-0.4	0.3
Chemicals and chemical products	0.4	0.2
Basic metal products	0.2	-1.8
Petroleum products	2.4	-7.2
Total manufacturing	0.5	1.8

For further information, order the publication *Price Indexes of Articles Produced by Manufacturing Industry, Australia (6412.0)*, or contact Peter Cordy on (06) 252 5547.

Home finance growth slows further

There was a 1.3 per cent increase in the provisional trend estimate of the number of dwelling units for owner occupation for which finance was committed to individuals in September 1993. This is the lowest monthly increase since the latest upward trend began in January 1993, but is 22.1 per cent higher than in September 1992.

A fall of 4.5 per cent or more in the seasonally adjusted figure for October would reverse the current upward trend. The average monthly change in the seasonally adjusted series, without regard to sign, is about 5 per cent.

Of the different categories of housing financed, 'construction of dwellings' showed the strongest growth, at 2.1 per cent, continuing the steady upward movement since November 1991. 'Purchase of established dwellings' grew by 1.1 per cent and 'purchase of newly erected dwellings' by 0.7 per cent, both continuing the upward trends which began in January 1993.

In September the seasonally adjusted estimate for the number of dwelling units financed increased by 1.9 per cent over August and 21.1 per cent over September 1992. The unadjusted number of dwelling units financed in September was 6.6 per cent higher than August 1993 and 19.1 per cent higher than in September 1992.

HOUSING FINANCE
SEPTEMBER 1993
Number of dwellings

	Established dwellings	Construction of dwellings	Newly erected dwellings	Total
% change from August 1993				
Trend	1.1	2.1	0.7	1.3
Seasonal	2.6	-0.3	-0.3	1.9
Unadjusted	9.3	7.2	4.2	8.6
% change from September 1992				
Trend	21.8	24.7	16.0	22.1
Seasonal	19.8	27.6	15.8	21.1
Unadjusted	18.2	23.9	13.3	19.1

Refinancing of dwelling units accounted for 14.9 per cent of the total September trend estimate. Last month it accounted for 15.1 per cent of the total number and in September 1992 represented 12.6 per cent.

For further information, order the publication *Housing Finance for Owner Occupation, Australia* (5609.0), or contact Mark Dennis on (06) 252 7117.

Young people — the full picture

Government and community decision-makers now have a comprehensive statistical basis for their work in all areas affecting young Australians.

Produced by the Australian Bureau of Statistics (ABS) and the National Youth Affairs Research Scheme (NYARS), *Australia's Young People* is a new national publication that follows on from the recent release of individual State and Territory profiles on 12 to 25 year-olds.

This publication is a compilation of Census data (including 1981, 1986 and 1991), and statistics drawn from a range of ABS social and labour surveys, and is designed to provide the basis for a sound understanding of 12 to 25 year-olds in Australia and the issues affecting them. *Australia's Young People* contains chapters dealing with population characteristics, cultural diversity, education, living arrangements, working life, income, and vital and health statistics.

Information focuses on sex, age (cohorts 12-14, 15-17, 18-19, 20-24, and 25), State and Territory comparisons, and cultural background — all presented in a series of comprehensive tables and graphs with descriptive commentary.

A sample of information to be found in *Australia's Young People* follows:

In 1991 —

- ☐ there were 3 662 200 12 to 25 year-olds in Australia, who comprised 22 per cent of the total population
- ☐ young Aboriginal and Torres Strait Islander people made up 2 per cent (79 600) of all young people
- ☐ almost 15 per cent (548 300) of young people were born overseas and of these, 40 per cent were born in the main English-speaking countries, mostly UK, Ireland and New Zealand
- ☐ young females were more likely to be parents or partners in couples (19%) than young males (9%)
- ☐ a lower proportion of young people left school at the age of 15 or younger (15%) than was the case for the total population (37%)
- ☐ there were 1 928 800 15 to 25 year-olds working or looking for work, who accounted for almost a quarter of the total labour force
- ☐ the most common occupation among young people was salespersons and personal service workers (23% or 365 000)
- ☐ over 58 per cent of 15 to 25 year-olds reported gross incomes of \$16 000 or less
- ☐ motor vehicle accidents accounted for over a third (720) of deaths among 15 to 24 year-olds. Over three-quarters of these deaths were among young males
- ☐ among 18 to 25 year-olds, 88 per cent reported their health status as good or excellent.

Home growers and the Australian food production industry

In the year ended April 1992, about 153 000 tonnes of vegetables and 110 000 tonnes of fruit were produced by Australian home growers. Domestic hens laid about 26 million dozen eggs and recreational fishing landed a total catch of about 31 000 tonnes.

Australian home brewers bottled about 40 million litres of beer and wine making households produced about 4 million litres.

These preliminary estimates are taken from the Home Production Survey. Home production levels of selected foodstuffs were obtained in interviews from a representative sample of 34 000 households across Australia. Data were collected on fruit, vegetables and nuts grown, poultry slaughtered, eggs laid, beer and wine produced and seafood caught.

Comparisons with the Agricultural Census and other data show that home production is a small percentage of total production except in eggs and fish. Domestic egg production was almost 20 per cent of farm production, while recreational fishing's estimated catch was 14 per cent of the commercial catch in the comparable period.

On a State basis, households in Queensland produced more fruit, eggs and beer, and caught more seafood than in any other State. Victorians produced the most vegetables, poultry and wine while South Australians picked the most nuts.

ESTIMATED HOME PRODUCTION OF SELECTED FOODSTUFFS
YEAR ENDED APRIL 1992

	Poultry (tonnes)	Seafood (tonnes)	Fruit (tonnes)	Vege- tables (tonnes)	Nuts (tonnes)	Eggs ('000 dozen)	Beer ('000 litre.)	Wine ('000 litres)

EMPLOYEES WHO HAVE WORKED WITH THEIR CURRENT EMPLOYER FOR ONE YEAR OR MORE

Change afoot in the workplaces of Australia

A new Australian Bureau of Statistics data collection has confirmed a very high incidence of change in the working lives of Australian employees.

Results from a survey of career experience, conducted for the first time in February 1993, showed that more than three-quarters (78%) of Australia's 6.3 million wage and salary earners had worked with their current employer for one year or more.

Almost all (96%) of these employees reported some change in their work in the last 12 months. The changes most commonly reported were 'more responsibility' (42%), 'new, different or extra duties' (39%) and 'used different computer based equipment or packages' (32%).

EMPLOYEES WHO HAVE WORKED WITH THEIR CURRENT EMPLOYER FOR ONE YEAR OR MORE: ALL CHANGES IN WORK, FEBRUARY 1993

All changes in work with current employer in the last 12 months

	Full-time	Part-time	Males	Females	Persons
— per cent —					
Employees excluding owner managers					
Promoted	8.9	2.0	7.6	7.6	7.6
Transferred	10.1	3.9	8.9	9.0	9.0
Employees including owner managers					
Change in hours	12.3	28.5	13.1	18.1	15.2
Used different computer based equipment or packages	34.7	18.1	31.4	32.0	31.7
Used other different machinery, tools or equipment	21.3	12.8	23.2	15.2	19.8
Changed location of employment	10.8	5.7	10.6	9.0	9.9
New, different or extra duties	41.8	26.9	38.6	39.8	39.1
More responsibility	45.1	25.8	42.2	40.9	41.6
None of the above	4.8	2.9	5.1	3.6	4.5
	4048.1	894.5	2,811.6	2,131.0	4,942.5

Of all employees who had worked with their current employer for one year or more, 8 per cent had been promoted in the last twelve months and 9 per cent had transferred to another position with their employer. Employees working at large locations (100 or more employees) were more likely to have been promoted and transferred (10% and 12%) than those at very small locations (less than 10 employees) where 3 per cent had been promoted and 4 per cent transferred.

Along with the changes occurring in the workplace, 42 per cent of the 4.6 million wage and salary employees who had worked with their current employer for one year or more reported that their work performance had been formally appraised in the last twelve months.

The industries where performance appraisal was most common were:

- ☐ finance, property and business services (60%);
- ☐ electricity, gas and water (50%); and
- ☐ public administration and defence (49%).

Continued ...

For full-time employees, 45 per cent had been given a formal appraisal compared with 30 per cent of part-time employees. For both full-time and part-time workers, the proportion of employees who had been appraised was higher for females than for males.

In February 1993, there were 1.3 million employees who had been with their current employer for less than 1 year. Of these, 63 per cent worked full time and 59 per cent were permanent employees. In comparison, 2.5 million employees had been with their current employer for 5 years or more. Of this group, 87 per cent worked full time and 91 per cent were permanently employed.

The survey also collected details of breaks from work. In February 1993, there were 200 400 job-holders who had had a break from work of six months or more, while with their current employer. The majority of this group were female (69%), two-thirds of whom took the break for family reasons. Females were more likely to have had unpaid leave (53%) than males (32%) and for longer periods of time. Some 34 per cent of females who had taken a break, had breaks of one year or more compared with 29 per cent of males.

For further information, order the publication *Career Experience*, Australia (6254.0), or contact Mark Patton on (06) 252 7204.

Small business in Australia

There were some 859 000 private sector small businesses in Australia in 1991-92, making up 95 per cent of all private sector businesses. These businesses employed 2.8 million people or nearly 52 per cent of all private sector employment. Of these, about 102 000 were small agricultural businesses which employed 235 000 people.

In terms of employment, non-agricultural private sector small business appears to have withstood the recession better than the larger business sector. Employment growth through the 1980s in the small business sector averaged 3.9 per cent per annum. Over the past two years it has been significantly lower at 0.5 per cent per annum.

Compared with the large business sector, however, the growth has been quite good, as the following table shows.

AVERAGE ANNUAL GROWTH: EMPLOYMENT
Per cent

	1983-84 to 1989-90	1989-90 to 1991-92
Small businesses	3.9	0.5
Other	4.6	-5.7

NON-AGRICULTURAL PRIVATE SECTOR
AVERAGE ANNUAL EMPLOYMENT GROWTH
1983-84 TO 1989-90

NON-AGRICULTURAL PRIVATE SECTOR
AVERAGE ANNUAL EMPLOYMENT GROWTH
1989-90 TO 1991-92

Between 1989-90 and 1991-92 it has been the services sector where small business job growth has been maintained. Sixty thousand new jobs have been created there, while, over the same period, employment in the goods producing sector has declined by about 35 000.

These are some of the conclusions that can be reached from the latest update of the Australian Bureau of Statistics' comprehensive reference publication on small business released this month.

For further information, order the publication *Small Business in Australia* (1321.0), or contact Christine Price on (06) 252 5746.

This week in brief ...

□ Mining production

The value of minerals produced in the metallic minerals, coal, oil and gas sectors declined in 1991-92 by 1.2 per cent from \$26 293.1 million in 1990-91 to \$25 985.4 million. Although increases were recorded in the metallic minerals and coal mining industries the major contributor to the decrease was a fall in revenue generated by the oil and gas industry of \$818 million (9.5%) during 1991-92.

The value of metallic minerals increased by \$47.3 million (0.4%) and coal by \$462.7 million (6.9%). Australia continued in 1991 to be the world's largest producer of bauxite (37.6% of the total world production), diamonds (33.3%), lead (16.3%) and the mineral sands ilmenite (47.6%), rutile (44.4%) and zircon (36.5%).

The value of gold bullion produced increased by 6.4 per cent from \$3 567.7 million in 1990-91 to \$3 796.6 million in 1991-92. The value of iron ore (excluding Tasmania) also increased, by 10.0 per cent from \$2 944.6 million in 1990-91 to \$3 239.0 million in 1991-92.

Source: *Mining Production, Australia, 1991-92* (8405.0).

□ Consumption of foodstuffs

Preliminary results for 1992-93 show that the apparent per capita consumption of meat and meat products fell by 1.8 per cent to 79.6 kg. Major factors in this decline were reductions in apparent per capita consumption of offal and other meat, down 24.2 per cent to 2.5 kg, and lamb, down 6.7 per cent to 12.5 kg. A significant increase occurred in the per capita intake of mutton which rose 11.8 per cent to 8.5 kg. Veal rose by 6.3 per cent to 1.7 kg whereas beef fell by 1.1 per cent to 35.4 kg. The consumption of pigmeat decreased by 2.1 per cent to 18.9 kg per capita in 1992-93, after rising 7.2 per cent during the previous year. The apparent per capita consumption of poultry increased by 2.7 per cent to 26.5 kg in 1992-93.

Source: *Apparent Consumption of Selected Foodstuffs, Australia, 1992-93, Preliminary* (4315.0).

□ Pay indexes

Over the 12 months to September 1993, the weekly award rates of pay index for full-time adult employees rose by 0.8 per cent. For full-time adult males and full-time adult females the indexes rose by 0.7 per cent and 0.9 per cent respectively. The largest movements over the period for full-time adult females occurred in the recreation, personal and other services industry (2.5%), and in the public administration and defence industry (2.1%).

Continued ...

For full-time adult males the largest increases occurred in the public administration and defence industry (1.7%), in the wholesale and retail trade industry, and in the recreation, personal and other services industry (both 1.3%).

Source: Award Rates of Pay Indexes, Australia, September 1993 (6312.0).

Wine production down slightly

Preliminary results from the wine production and wine stocks collections indicate that there were 413.9 million litres of beverage wine produced in Australia in 1992-93, a decrease of 1.8 per cent from 1991-92. This was primarily due to a decrease of 27.7 per cent in fortified wine production.

Wine production fell in both South Australia (down 12.7%) and Victoria (down 7.2%) while production in New South Wales increased by 16.3 per cent. Despite this, South Australia remains the State which produces most wine with 45 per cent of Australian production, followed by New South Wales with 37 per cent and Victoria with 17 per cent.

The quantity of fresh grapes crushed in 1992-93 decreased by 1.4 per cent to 610 667 tonnes. South Australia's share of the Australian crush decreased from 51.4 per cent in 1991-92 to 46.2 per cent while during the same period the New South Wales proportion increased by from 31.6 per cent to 37.2 per cent.

For further information contact Peter Carmalt on (08) 237 7632.

Finance in brief ...

☐ Personal Finance

The provisional trend estimate for personal finance commitments for September 1993 was \$1 847.8 million, an increase of \$33.3 million (1.8%) on August 1993 and an increase of \$112.7 million (6.5%) on September 1992.

The trend estimates for fixed loan facilities increased by \$19.8 million (1.7%) and commitments under revolving credit facilities increased by \$13.6 million (2.0%) on August 1993.

☐ Commercial Finance

The provisional trend estimate for commercial finance commitments for September 1993 was \$7 003.0 million, a decrease of \$196.2 million (2.7%) on August 1993 and down \$419.7 million (5.7%) on September 1992.

The September 1993 trend estimate for commitments under fixed loan facilities fell by \$10.1 million (0.3%). The trend estimate for commitments under revolving credit facilities decreased by \$186.0 million (4.7%).

☐ Lease Finance

The provisional trend estimate for lease finance commitments for September 1993 was \$459.3 million, a small increase of \$2.2 million (0.5%) on August 1993 and up \$52.1 million (12.8%) on September 1992.
